

Giving your metal a facelift ▶▶▶▶

Central Minnesota Finishing Inc. (CMF) offers high quality metal sandblasting and powder coating to the Sauk Centre area. CMF was founded in 1993 by Bob Peterson and Marvin Buker and has been solely owned by Bob Peterson since 2005.

The company can sandblast and powder coat many different sizes, with a range of capabilities range from one-piece orders to large quantity order.

CMF has done a wide range of projects, painting for many industrial customers with requests for flat beds, trailers, snow buckets, grapple forks and many other items.

They are able to do those smaller projects as well, things like metal cemetery flower pots and memorials. Specifically, CMF has worked on armed forces memorials and a cemetery bench memorial that can be seen in Sauk Centre.

Not only can CMF work on new products but they also have experience in restorative work, so you can breathe new life into old chairs, car parts, full deck railings and spiral stair cases.

Able to accommodate any metal piece up to 40 feet in length, CMF's large-capacity facility has enough space for nearly any sandblasting project one may need.

Sandblasting is an abrasive method that forces solid particles across

a metal surface at high speeds which helps to smooth, shape and clean the product. Sandblasting is a suitable for many types of metal products such as car rims and frames, railings, lawn furniture and trailers. It can also get rid of coatings on metal such as rust or paint.

Blasting not only keeps metal products looking good but also protects them from rust and other damage.

CMF has many blasting options, such as black diamond sandblasting for a standard cleaning and finishing, as well as bead blasting, which is mainly for stainless steel.

Bead blasting can cover irregularities on metal such as marks left from welding and leaves either a matte or satin finish. This particular method is especially popular within the food service industry.

When it comes to powder coat painting, CMF's conveyor line can accommodate parts up to 7' long x 2' wide x 4' high, and their batch oven can handle parts up to 30' long x 10' wide x 9' high.

Powder coat paint is a metal finishing method which is not only environmentally safe and solvent free, but is long-lasting and prevents rust. Powder coating is beneficial because it is available in a large variety of textures and colors and resists cracking and peeling. CMF offers a variety of Powder coat paint options, with textures, wrinkles, indoor, outdoor, high temp, low

temp and FDA approved options. Color matching is also available.

If transporting metal for cleaning or restoration is a concern, CMF also offers pickup services for metal parts.

These pickup services are available in the Sauk Centre area.

Follow Central Minnesota Finishing Inc. on Facebook or contact CMF at (320) 352-5747 or via their website: centralminnesotafinishing.com.

Powder coating your railing can give it a new refreshed look.
